

Point, a cluster for technological innovation

Founded in 1996, POINT is a science park featuring company offices, as well as research and innovation projects. POINT is formed of a multipurpose area of over 38,000 sqm with spaces dedicated to company offices, laboratories and research centres. It also accommodates university work and training activities.

There are many advantages to working within POINT, including the possibility of links with other science and technology parks, research centres, the most prestigious Italian and foreign universities, as well as major public bodies. Bergamo Sviluppo deals with the logistical organisation of the spaces at POINT, offering services to businesses and institutions to support their competitiveness and growth.

At the Bergamo UNI Point, located within the Dalmine POINT, we provide computer stations so economic operators and anyone else interested may consult free of charge the full texts of Italian, European and international technical regulations, thereby bringing the world of manufacturing closer to the complicated reality of technical legislation. Anyone who makes an appointment at UNI Point will also be able to receive information and advice on acquiring UNI regulations, products and services.
